PRESS RELEASE

EMCI Signs Exclusive License With Prometheus Solutions

Plans to commercialize and distribute smartphone-based portable medical diagnostic tools

Mission, Kansas, September 20, 2012: EMCI has reached a long-term, exclusive license with Prometheus Solutions, a Kansas company, to develop smartphone medical diagnostics. This technology significantly reduces the cost of essential diagnostic tools used widely in the medical industry by offloading processing of data to the user's smartphone or tablet wirelessly.

Peter Lucas, COO of EMCI, says "We have been highly impressed with Prometheus' ability to engineer elegant tools into extremely compact, space-saving designs. We intend to work with them to develop an array of diagnostics tools based on their designs."

Prometheus Solutions is a Kansas company focused on conceptual engineering of medical and diagnostic devices. In addition to EMCI, Prometheus has worked with MRI Global, a renowned scientific research facility.

James Lucas and Peter Lucas founded EMCI in 2006. Its focus is medical device innovation and development. The company has a solid history in the medical device industry and is currently developing and commercializing a wide array of new, cutting-edge technologies.

Relatively unique in the industry, EMCI's work spans across several key areas:

- Large-scale production of devices already in the market
- Development of its own technologies
- Development, commercialization and manufacturing of licensed technologies
- Productive partnerships with intellectual property owners
- World-class medical device outsourcing

The company has capabilities that start with engineering, prototyping and regulatory and go all the way through manufacturing, large-scale production, and after-sales service and repair.
